

Stainless Steel end suction Centrifugal Pump

ISO 2858-DIN 24256 Standard

ISO 2858 PUMP
Bare Shaft

Supreme Motor Pump
Close Couple

Outstanding Features

Superior Hydraulic Design
Easy Dismantling
Stainless Steel Wet parts
Acid & Alkali Resisting

Designed for

Liquid Transfer
Water Supply
Building Service
Environment Engineering
Industrial Application
Vessel Seawater Circulation

Limitation

Flow: 150m³/hr
Head: 120m max.
Pumped Liquid: -15°C to +180°C
Operating Pressure: 16 bar max

Stainless Steel Centrifugal Pump

APEC ISO Pump and Supreme Motor Pump are designed in accordance with ISO 2858- DIN 24256 Standard. All wet parts, including volute casing, shaft, impeller, are made of Stainless Steel for long time endurance, acid-alkali resisting, and rust free liquid transfer.

Applications

Water supply

Water supply & distribution; pressure boosting in waterworks and substations, sprinkler, drip and flood irrigation.

Industry

Water supply and circulation in cooling and heating systems. Pumping of cooling brine and cooling agents in equipment and mechanical engineering. Paper and sugar industries, iron and steel production, condensate transfer and boiler fill.

Washing and cleaning installations, water-curtain spray-paint bays, emptying and filling of tanks and reservoirs, pumping of seawater and brackish water, moistening in dedusting plants.

Building services

Circulation of liquids, heating and cooling water in central heating, ventilation and air-conditioning systems. Fire fighting service. Water circulation for swimming pools, general mechanical services.

Environment Engineering

Filter installations, water treatment systems, dedusting plants, recooling systems, and installations for soil sanitation and infiltration water treatment.

Vessels

Circulation of cooling system for fish catch, water supply and general mechanical service.

Pump Features

APEC ISO Pump and Supreme motor pump have superior hydraulic design and incorporate high technology manufacturing methods, which enable significantly higher efficiencies for less power consumption and minimum maintenance. All these features guarantee Prostain pump users continuing economy in all applications.

APEC ISO Pump and Supreme Pump are single stage, non self-priming, centrifugal volute pumps, conforming to ISO 2858 Standard.

Operating Conditions

Flow:	Max. 150 m ³
Head:	Max. 120 m.
Liquid Temperature:	-15°C to +180°C
Operating Pressure:	max. 16 bar.
Designed for non-aggressive, non-explosive thin and clean liquids without solid particles or fibers.	

International Standard

Conforming to ISO 2858 Standard means dimensional interchangeability with other makes of pumps, manufactured to the same international standard. **APEC** pumps exceed the ISO performance standard because of hydraulic design superiority. Due to the pump design, the backplate and impeller can be easily dismantled from the drive end without removing the volute casing from the pipework. As standard of Prostain ISO Pump, a support foot is fitted to the bearing housing.

Stainless Steel Centrifugal Pump

Standard Features

APEC pumps include taper mounted and keyed impeller for easy removal from shaft during servicing and positive locking during operation; heavy duty shaft with large capacity impeller and bearing for safe operation at high speed. As type 304 stainless steel volute for added safety; reusable O ring body seal; minimum number of parts for full range (only two shaft modules) reduces spare parts stocking; double curvature impeller vanes produce highly efficient suction performance. Type 316 stainless steel shaft; ductile iron shaft clamp; type 304 stainless steel volute with integral suction and discharge flanges and mounting feet; pressure rated to 1200 kPa (120 meter head); SS 304 impeller, backplate, and impeller nut; cast iron housing with sealed for life grease packed bearings; lip type shaft seals to protect bearings; single mechanical seal

Motor

The **APEC** standard motor is a totally enclosed, fan-cooled squirrel-cage motor that dimensionally complies with IEC and DIN. The motor pump uses standard off the shelf foot mounted and flange electric motors which require no modification and are therefore no more difficult to purchase than motors used on long coupled units. Foot mounted on the motor and on the pump body combine to provide exceptionally rigid mounting for the complete unit.

Enclosure Class: IP 54

Insulation Class: class F from 15 kw; Class B

Ambient Temperature: According to IEC

50 HZ Voltages: 3x220-240/380-415V

60 HZ Voltages: 3x200-230/380-460V

Optional Base Assembly

Baseplate Kit

A baseplate kit is available to allow on-site basing up of pump and motor, sizes to suit all models and motors.

The kit includes baseplate, flexible or spacer coupling, coupling guard, all fasteners and shims required for on-site alignment.

Couplings

Flexible and spacer coupling:

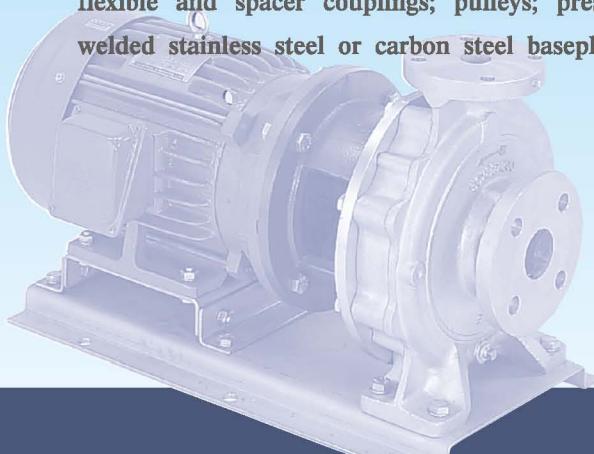

A coupling with spacer enables dismantling of the complete discharge cover including shaft seal and impeller without removing the motor or pump body from the baseplate.

Maximum Operating Temperature

Maximum pumped liquid temperature for the standard ISO Line pump is 80°C using standard seals. Liquids up to 180°C can be handled using special seals.

Optional Features

Type 316 stainless steel impeller, volute, and backplate; optional mechanical seal; works certified and witnessed tests for guaranteed performance; flexible and spacer couplings; pulleys; pressed/welded stainless steel or carbon steel baseplates.
